It's been a few years since I've ridden a titanium bike, so rolling down the first stretch of road on the Vamoots felt like saying hello to a long-lost friend. And I really was, because I owned a Vamoots years ago. The feel of ti is unlike any carbon bike, and the frequency at which this one transmits road vibrations is in a unique range: The sweet spot is while riding at a tempo pace, 17 mph or so. The bike just seems to float across the road.—*Ron Koch*

### What You Need to Know

**Price:** \$9,900

**Weight:** 17.5 lb (54cm)

**Info:** [moots.com](http://moots.com)

I felt pretty special riding the Moots Vamoots DR. It glided along roads elegantly and smoothly. It felt springy and durable and sure of itself. But where it really shined was on descents. I felt like I could throw my body into any corner and make the bike go exactly where I wanted it to hug the farthest edge of the road and lean into turns. And the disc brakes made the whole experience that much more amazing. If I didn't have such a long list of must-haves and must-fixes for my home, I'd use that money to buy this bike. That's how much I loved it.—*Jen Sherry*
